Emergency Management Association

Washington State Field Operations Guide (WAFOG)

Version 1.0_23 December 2020

Common Responsibilities of All Deployed Responders

- ❖ Be prepared to deploy – have Go kit(s) ready
- ❖ Receive assignments – DO NOT self-deploy
 - Reporting location, time, and travel route
 - Description of type and severity of incident
 - Instructions for communication while enroute
 - Monitor incident status while enroute
- ❖ Start an ICS 214 to document activities
- ❖ Upon arrival, check in at correct location
- ❖ Receive briefing from immediate supervisor
- ❖ Gather information on current incident status
 - Copy of IAP, face-to-face, ICS 201
 - Document current situation if necessary
- ❖ Document significant activities on ICS 214
- ❖ Maintain asset accountability
- ❖ Brief, assign and manage subordinates, if any
- ❖ Work safely – ensure safety
- ❖ Participate in planning process if appropriate
- ❖ Keep systems operational – verify!
- ❖ Brief replacement prior to shift change
- ❖ Demobilize as directed – when and how

About this Guide

Points of Contact for this Guide

The purpose of the Washington Statewide Tactical Interoperable Communications Field Operations Guide (WAFOG) is to increase efficiency in establishing interoperable communications during incidents, create a consistent knowledge base of interoperable communications frequencies and networks, and provide a helpful tool for pre-planning and interoperable communications training and exercises.

Please send updates, corrections, or comments about the WAFOG in word format to the point of contact (POC) listed above.

INTEROPERABLE COMMUNICATIONS

COMMON ISSUES

1. Incident is using radio channels in more than one band (VHF, UHF, and/or 700/800 MHz)
2. Incident using different radio bands via console or gateway patches
3. Unable to communicate critical information due to radio congestion
4. Unfamiliar with radio system(s) or assigned radio functionality
5. Instructions and assignments not clear
6. Have no or inadequate communication with your crew members or supervisor
7. Dispatch to dispatch channel patching
8. Inadequate number of tactical channels available or assigned
9. Multiple conversations on the same talk group or channel
10. Lack of sufficient coverage areas for existing systems
11. High level of background noise that makes communications difficult
12. Potential for multiple uncoordinated radio gateways in an area that would interfere with each other
13. Multiple agencies performing individual radio programming at the incident

14. Non-standardized use of plain language and continuing use of 10 codes
15. Responding agencies have not identified a single Communications Unit Leader (COML) for the incident
16. Some radio equipment and systems do not provide dependable coverage inside buildings

SYSTEM USER RESPONSIBILITIES

Agencies will retain the following rights and responsibilities:

- Agencies are responsible for complying with Memoranda of Understanding (MOUs) and Agreements within their respective jurisdictions.
- Authorized representatives of agencies participating in this plan have the authority to request the use of equipment, including systems and mobile assets, in accordance with Standard Operating Procedures (SOPs).
- Where applicable, agencies will be responsible for consistently maintaining, testing, and exercising connectivity to interoperable communications.
- Incident Commanders (ICs) retain the right to decide how to utilize interoperable communications.

PRIORITIZATION AND SHARED USE OF REGIONAL INTEROPERABILITY ASSETS

In response to events or incidents which cross over agency responsibilities, there will potentially be competing demands and priorities for the use of interoperable communications assets.

An Incident Commander (IC), in cooperation with assisting agencies, will have the authority to request the use of interoperability assets. The IC, Logistics Section Chief, or COML, when designated, will direct further coordination and delegation of the interoperable communications assets assigned to the event or incident in question.

Agencies should judiciously activate needed interoperable assets both to respond effectively to the event and/or incident and to minimize any negative impact on surrounding agencies or jurisdictions. Specifically, interoperable communications should be attempted with the following order of deployment in mind (subject to the involved agencies' disciplines/responsibilities and the nature of the event/incident).

1. Leverage face-to-face communications wherever appropriate. For example, co-location of all command and general staff at the Incident Command Post (ICP) provides the best direct communications and reduces the demand on interoperability resources.
2. Employ local communications assets until those assets become taxed or inadequate based on the nature and/or scope of the incident.
3. If response agencies operate on disparate systems, use shared or mutual aid channels to establish interoperable communications.
4. If response agencies do not share systems or channels, use a gateway solution to establish interoperable communications.
5. Where interoperable communications cannot otherwise be established between response agencies, use swap or cache radios to establish communications for responders.

6. Use non-public safety common carrier communications systems.
7. If no other method of interoperability can be established, relay communications through staff members (runners).

When the same resources are requested for two or more incidents, resource assignments should be based on the priority levels listed below (in decreasing priority; i.e., lower number indicates a higher priority).

1. Incidents where imminent danger exists to life or property
2. Disasters, large scale incidents, or extreme emergencies requiring mutual aid or interagency communications
3. Incidents requiring the response of multiple agencies
4. Pre-planned events requiring mutual aid or interagency communications
5. Incidents involving a single agency where supplemental communications are needed for agency use
6. Drills, tests, and exercises

In the event of multiple simultaneous incidents within the same priority level, the resources should be allocated with the following principles in mind.

1. Incidents with the greatest level of exigency (e.g., greater threat to life or property, more immediate need, etc.) have priority over less exigent incidents.
2. Agencies with single/limited interoperability options have priority use of those options over agencies with multiple interoperability options.
3. When possible, agencies already using an interoperability asset during an incident or event should not be redirected to another resource.

INTEROPERABILITY GUIDELINES

Dispatch Center of Jurisdiction

The Public Safety Communications Dispatch Center of the agency initiating the incident is responsible for all primary dispatch tasks unless the decision is made by the Incident Commander or the Incident Dispatch Center to transfer the responsibilities to another Center. The Incident Dispatch Center is responsible for audio patching of talkgroups and relaying pertinent information to include who is involved, which talkgroups are patched, and who is in command.

1. Interoperable resources should be considered when the day-to-day communication systems are overloaded or multiple jurisdictions or disciplines are involved in a large incident or preplanned event.
2. Maintain the use of the National Incident Management System (NIMS) including the use and implementation of the Incident Command System (ICS) whenever possible.
3. Use plain language and common terminology (avoid acronyms and code).
4. Use clear unit identification procedures including the agency name before the individual unit identifier.
5. Maintain clear and concise radio communications discipline; be brief and to the point.
6. Request additional assistance when needed.
7. Consider demobilization as event winds down.

REQUEST ON-SCENE COMMUNICATIONS

Requests for on-scene Interoperable equipment and support will initially be made from the Incident Commander or designee.

Each individual support/resource request should be routed through the nearest jurisdictional Emergency Management Agency (EMA). All requests beyond the local and county capabilities are routed through ESF-2 (via EMITS) at the State Emergency Operations Center (SEOC).

The order of support will be:

1. Local
 - a. The IC or designee shall first attempt to find needed resources within the local resources.
 - b. This includes city and municipality resources.
2. County
 - a. This option is to be used if the local resources are exhausted or not available.
 - b. This includes all resources available within the affected county.
3. Regional
 - a. This option it to be used if the county resources are exhausted or not available.
 - b. Resources available through Mutual Aid Agreements (MAA) that involve multiple counties will be considered regional without regard to the established EMA regions. This includes the communications truck that is normally assigned to that region and any EMA equipment that may be pre-staged in that region.
4. State
 - a. This option should be used if the regional resources are exhausted or not available and includes the state

communications truck and available assets from other state agencies and other regions.

5. Federal

- a. EMA will be responsible for requests or procurements from FEMA or any other federal agency.

ESTABLISHING INITIAL ON-SCENE INTEROPERABLE COMMUNICATIONS

The on-scene commander, designee or COML will have the responsibility for coordination of interoperable communications at the scene.

The on-scene commander, or designee, will make decisions or perform actions including, but not limited to:

1. Monitoring the calling channels
2. Determining specific interoperable channels that are to be used on scene and make assignment to specific nets, channels or groups
3. Completing the initial ICS 205 form
4. Assignment to specific nets, channels or groups
5. What local communications resources will be used
6. Notifying the SEOC when the Interoperable frequencies are in use
7. Making determinations as to additional resource requests
8. Determination about programming radios at the scene

The regional or state communications truck may not be the first on the scene and local resources may have the capability to provide the initial communications in the area. When a regional or state communications truck or county/ municipal vehicle is on

scene, they may take over as the COML as designated by the on-scene commander.

Supporting state agencies and all counties have a signed frequency use agreement that grants them permission to use the VHF and UHF Interoperable frequencies. These agencies should have the Interoperable frequencies pre-programmed into their radios.

OPERATIONAL PROCEDURES

The Radio Operator (RADO) will monitor **VCALL10 (VTAC11?)** and UCALL40D when the disaster scene is established.

1. **VCALL10 (VTAC11?)** is the primary VHF calling channel and UCALL40D is the primary UHF calling channel. 700/800 MHz National Interoperable frequencies may also be used. These channels will be used for checking in when units first arrive on the scene.
2. Individual units or functions may be assigned another working channel upon check in by the on-scene commander, their designee or the COML.
3. Requests for establishment or disestablishment of cross connection for radio frequencies should be made through the on-scene commander, their designee, or the COML.
4. An announcement should be made on all of the applicable frequencies when a patch is made or broken.
5. Interference and operational issues will be handled on a case by case basis.

The order of communications support escalation will be:

1. Normal local communications systems including Mutual Aid (MA) frequencies
2. Local county fixed interoperable equipment
3. Regional interoperable vehicle support
4. State interoperable vehicle and transportable support
5. Federal communications support

NATIONAL INCIDENT MANAGEMENT SYSTEM (NIMS)

NIMS was developed so that emergency response professionals from different agencies, disciplines and jurisdictions can work together to coordinate, manage and support emergent and planned incidents. The five major components of NIMS are:

1. Command & Management
2. Communications & Information Management
3. Preparedness
4. Resource Management
5. Ongoing Management & Maintenance

This guide focuses on all five components but will have a primary focus on Command & Management and Communications & Information Management.

INCIDENT COMMAND SYSTEM (ICS)

ICS is a key feature of NIMS. It is a widely applicable management system designed to enable effective, efficient management by integrating a combination of communications, equipment, facilities, personnel, and procedures operating within a common and flexible organizational structure. ICS is used to organize on-scene operations for a broad spectrum of incidents

and guides the process for planning, building and adapting that structure. ICS is based on the command principles of chain of command, delegation of authority, division of labor, span of control and unity of command. The five major functional areas of ICS are administration/finance, command, logistics, operations, and planning.

REGIONAL EMERGENCY RESOURCE STAFFING

Dispatch Center or Emergency Operations Center (EOC)

Communications Coordinator (**COMC**) – The COML will work with the COMC to coordinate communications with other dispatch centers and the incident communication plan. Locally, the jurisdictional dispatch center supervisor or dispatcher will act as the communications coordinator. Coordinators may also be located at the county, region, state, and/or federal level.

At an Incident/Event

Communications Unit Leader (**COML**) – Manages the technical and operational aspects of the Communications Function during an incident or event. Develops the ICS 205 (Incident Radio Communications Plan) and supervises the Communications Unit.

Technical Specialist (**THSP**) – Allows for the incorporation of personnel who may not be formally certified in any specific NIMS/ICS position. THSPs may include local agency radio technicians (as opposed to the COMT), telephone specialists, gateway specialists, data/IT specialists, and/or cache radio specialists.

Incident Communications Center Manager (**INCM**) – Supervises the operational aspects of the Incident Communications Center (ICC) (mobile unit and/or fixed facility). During an incident, the ICC is designed to absorb incident traffic in order to separate that traffic from the day-to-day activities of the dispatch center. The ICC is typically located at the Incident Command Post (ICP) in a fixed site, tent, trailer, or mobile communications unit.

Incident Communications Technician (**COMT**) – Deploys advanced equipment and keeps it operational throughout the incident/event.

Auxiliary Communications (**AuxComm**) – Auxiliary Emergency Communications (also known as AEC or AuxComm) provides supplementary and backup communications utilizing the services of volunteer communicators. AEC operates as part of the Communications Unit. AEC draws its resources from the licensed Amateur Radio operators within the state and has the capability to provide both intrastate and interstate AEC mutual aid.

Radio Operator (**RADO**) - Staffs a radio at the ICC and is responsible for documenting incoming radio and telephone messages. Incident dispatchers or tactical dispatchers are used as RADOs.

ICS PERSONNEL RESPONSIBILITIES

The following list is applicable to all ICS personnel:

1. Receive assignment from your agency, including
 - a. Job assignment, e.g., Strike Team designator, overhead position, etc.
 - b. Resource order number and request number
 - c. Reporting location
 - d. Reporting time
 - e. Travel instructions
 - f. Any special communications instructions, e.g., Travel Channel/Talkgroup

2. Upon arrival at the incident, check in at designated Check-In location. Check in may be found at:
 - a. Incident Command Post (ICP)
 - b. Base or Camps
 - c. Staging Areas
 - d. Helibases
 - e. If you are instructed to report directly to a line assignment, check in with the Division/Group Supervisor
3. Receive briefing from immediate supervisor
4. Acquire work materials
5. Conduct all tasks in a manner that ensures the safety of you and your co-workers
6. Organize and brief subordinates
7. Know the assigned frequency/talkgroup(s) for your area of responsibility and ensure that communications equipment is working properly
8. Use clear text and ICS terminology (no codes) in all radio communications. All communications to the Incident Communications Center will be addressed "(Incident Name) Communications," e.g., "Hayman Communications."

AREA COMMAND CHECKLIST

The Area Commander is responsible for the overall direction of incident management teams assigned to the same incident or to incidents in close proximity. This responsibility includes ensuring that conflicts are resolved, compatible incident objectives are established and strategies are selected for the use of critical resources.

Area Command also has the responsibility to coordinate with local, state, federal, and volunteer organizations and agencies that are operating within the Area.

INCIDENT COMMANDER (IC) POSITION CHECKLIST

The Incident Commander's responsibility is the overall management of the incident. On most incidents, a single Incident Commander carries out the command activity; however, Unified Command may be appropriate. The IC is selected by qualifications and experience.

The IC may have a deputy, who may be from the same agency, or from an assisting agency. Deputies may also be used at section and branch levels of the ICS organization. Deputies must have the same qualifications as the person for whom they work for, as they must be ready to take over that position at any time.

COMMUNICATIONS UNIT LEADER POSITION CHECKLIST

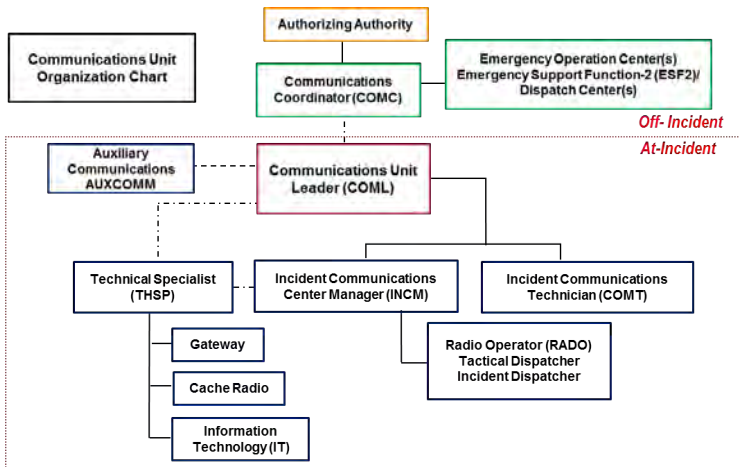

Note that some tasks are one-time actions while others are ongoing or repeated during the incident. The term "Communication" may refer to radio systems, data/internet systems, or telephone systems.

1. Obtain briefing from appropriate ICS staff member (your supervisor)
2. Assess communications systems/frequencies in use – document if not already done
3. Organize and staff Communications Unit as appropriate:
 - Assign Incident Communications Center Manager (INCM), if necessary
 - Order and assign adequate staff (COMTs, RADOs, THSPs)

- Brief incoming staff on current activities, duties, responsibilities and procedures
4. Establish safety procedures for personnel and ensure compliance
 5. Participate in planning cycle meetings and briefings
 6. Advise on communications capabilities/limitations
 7. Coordinate all communication systems use with local, area or state Communications Coordinator (COMC) as appropriate
 8. Develop/implement effective communications flow to/from the Incident Command Post (ICP)
 9. Assess ICP telephone needs / request additional lines if necessary
 10. Prepare and implement Incident Radio Communications Plan (ICS 205):
 - Obtain current organizational chart (ICS 203 or ICS 207)
 - Determine most hazardous tactical activity; ensure adequate communications
 - Make communications assignments for all other Operations Section elements
 - Determine Command and General Staff communications needs
 - Determine support (Logistics, Planning and Admin Sections) communications needs
 - Establish specific procedures for use of all communications equipment
 11. Ensure communications data on ICS 204 and ICS 206 is correct
 12. Document cellular phones and pagers in Incident Communications Plan (ICS 205T), if appropriate:
-

- Determine specific organizational elements to be assigned telephones
 - Identify all facilities/locations needing telephone communications, identify/document phone numbers
 - Determine which phones/numbers should be used by what personnel and for what purpose. Assign specific telephone numbers for incoming calls, and report these numbers to staff and off-site parties
 - **Do Not publicize OUTGOING phone lines**
13. Activate, serve as contact point, integrate and supervise auxiliary communications units (AuxComm)
 14. Ensure use of Communications Logs (ICS 309) for radio and telephone traffic
 15. Determine need and availability of additional nets and systems:
 - Obtain copy of local Tactical Interoperable Communications Plan (TICP)
 - Order resources as appropriate after approval by Section Chief
 16. Ensure that communications equipment operation is monitored continuously
 17. Document malfunctioning communications equipment, facilitate repair
 18. Establish and maintain communications equipment accountability system
 19. Provide technical information, as required, on:
 - Adequacy of communications system currently in use
 - Geographic limitation on communications equipment
 - Equipment capabilities
-

- Amount and types of equipment available
 - Anticipated problems in the use of communications
20. Estimate Communications Unit needs for expected operations, order relief personnel
 21. Provide briefing to relief on current activities and unusual situations
 22. Document all activity on Unit Log (ICS 214)

GENERAL RULES OF USE FOR INTEROPERABILITY ASSETS

The following general requirements apply to interoperability channels designated specifically for that purpose.

Encryption

The use of FCC-designated interoperability channels for the transmission of encoded, encrypted, or scrambled messages is prohibited.

Monitoring of Channels

Personnel should monitor interoperability channels/talkgroups prior to transmitting to minimize the possibility of interference with in-progress communications.

Plain Language

All communications on interoperability channels/talkgroups shall be in plain language. Abbreviations, acronyms and radio codes shall be avoided since they may cause confusion between agencies.

Unit Identification

The agency name or identifier shall always precede the unit identifier when operating on interoperability channels and talkgroups. The following additional procedures then apply:

- Always identify who you are calling first, followed by your unit ID. There is an implied “this is” between the two IDs, e.g., “Ocean Engine 51, Division B, XXX Strike Team 2001 C,” or “Golden Dog 1, State Patrol 21” (**Note:** these are examples). This identification process is critical, especially when a unit is broadcasting an emergency.

- Units must use their agency-assigned unit designator during transmissions. These should not be shortened and should include the entire set of letters and/or numbers.
- Base stations should identify themselves by using their agency name along with any other usual identifier. Unless equipped for automatic station ID, base stations must also use the FCC call sign shown on their license at least once every 30 minutes or at the end of a series of transmissions.
- When agencies, operating on different radio systems, respond to incidents requiring interoperability, units should finish their transmission with the channel on which they are transmitting (e.g., "Command, this is Monson Ambulance A1" or "Operations, Division A on Command" (**Note:** these are examples).

Loaned Equipment

- **Equipment Return** – The requesting agency is responsible for the returned condition of any equipment that is issued to them. Individuals or agencies will be billed for any replacement costs for equipment, accessories, batteries and any other item that was not returned in the same condition as issued.

RESOURCE MANAGEMENT (EQUIPMENT & PERSONNEL)

Request

Radio users requiring direct communications with a user from a different agency shall follow their agency's established procedures for requesting connectivity.

The following information should be provided by the requesting agency at the time of an activation request:

1. Requesting user's agency
2. On-scene agencies requiring interoperability
3. Reason for request/type of incident
4. Equipment and/or personnel required.
5. Expected duration of incident
6. Reporting location (ICP, Staging Area, etc.)
7. Any special travel information, to include any designated "travel" channel(s)/talkgroup(s)
8. Requester's and/or dispatch center contact telephone number

Mobilization

The responding agency POC should provide estimated activation and response times to be relayed to the dispatch center of the agency having jurisdiction over the incident. The dispatch center will relay the information to the Incident Commander or designee.

Supporting agency responder(s) should respond with appropriate equipment and supplies required to support their participation in the incident for the expected duration of that incident.

Staging

Supporting agency responder(s) should arrive at the designated arrival/staging location/Incident Command Post.

Responder(s) should check in with the appropriate manager at the incident and complete any required ICS forms prior to reporting to their specific assignment(s).

Assignment/Deployment

Once on-scene, operators of requested equipment (caches, gateways, etc.) and responders will be given specific assignments, typically through staging.

Operators or providers of interoperability equipment, once checked in to an incident, should report to the COML for specific information on their assignment.

Deactivation/Demobilization

IMPORTANT: Active channels/talkgroups supporting responders in hazardous or remote locations must be very carefully deactivated so that no responder is left on an interoperability resource with the belief that it is still active and/or still being monitored by a RADO or supervisor. In such deactivations, a roll-call of all responders on the channel is appropriate to ensure that the demobilization message has been received and responders are switching to their new assigned channel or talkgroup.

Before leaving the incident scene, responder(s) should check out with their supervisor and any appropriate manager at the incident, and complete any required ICS forms, as appropriate for the incident:

1. Unit Log (ICS 214)
2. Demobilization Checkout (ICS 221)
3. Performance Rating (ICS 225)

REQUEST TO USE ALL STR RESOURCES

Example below:

Un-Planned Event	Pre-Planned Event
<ol style="list-style-type: none">1. Consult on-scene COML or equivalent2. Contact Local EMA with information required in STR Request form<ol style="list-style-type: none">a. Describe nature/incident typeb. STR equipment requestedc. Location of Incidentd. Agencies involvede. Anticipated durationf. POC informationg. Additional resources needed3. Local EMA Director submits request through....4. EMA ESF-2 function assigns appropriate assets5. Responding agency notified to deploy assets6. Track deployment and delivery progress using the [Name] system	<ol style="list-style-type: none">1. Consult on-scene COML or equivalent2. Submit request at least 60-90 days in advance of event start date to EMA3. Supply Local EMA with information required in STR Request form<ol style="list-style-type: none">a. Describe nature/incident typeb. STR equipment requestedc. Location of Incidentd. Agencies involvede. Anticipated durationf. POC informationg. Additional resources needed3. Local EMA Director submits request through [Name] to EMA4. EMA ESF-2 function assigns appropriate assets5. Responding agency notified to deploy assets; or requestor picks up desired cache6. Track deployment and delivery progress using the EMITS system

WASHINGTON STATE REGIONS

WASHINGTON STATE REGIONAL INTEROPERABILITY ASSETS

The following pertains to all regions.

SHARED SYSTEMS

Shared systems provide public safety/service communications for agencies within the region. “Shared system” refers to a single radio system used to provide service to several public safety or public service agencies.

“Intra-system shared channels” refers to common frequencies/talk groups established and programmed into radios to provide interoperable communications among agencies using the same shared radio system. “Channel,” in this context, refers to the name of a common frequency/talk group programmed into a user’s radio.

GATEWAYS

Gateways interconnect channels of disparate systems (whether on different frequency bands or radio operating modes), allowing first responders using their existing radios and channels to be interconnected with the channels of other users outside of their agency.

A Communications Unit Leader (COML) or Incident Commander (IC) must be aware that multiple gateway activations in support of an incident can result in interference. Interference issues are best resolved by the technical support personnel assigned to the gateways.

Whenever possible, patches of one talkgroup to another talkgroup on the same system or platform should be accomplished at the console level to minimize channel loading.

Requesting a Gateway - The incident COML/COMC or their designee determines when a situation exists that requires the use of a radio gateway and notifies the appropriate dispatch center. The COML or COMC determines what gateways are available for use, identifies a specific gateway, activates that gateway, and coordinates the gateway deployment with the requesting agency Incident Commander or their designee.

REPEATERS

A “repeater” is a combination of a radio receiver and a radio transmitter that receives a weak or low-level signal and retransmits it at a higher level or higher power, so that the signal can cover longer distances without degradation. “Mobility” of a repeater is defined as:

- **Portable:** can be carried by a person and is self-contained.
- **Transportable:** requires a vehicle to transport it and can be set up to operate external to the transport vehicle.
- **Vehicle Mounted:** mounted/fixed in the transport vehicle and operates from within.

There are two types of repeater: a simplex repeater and a duplex repeater.

- A **simplex repeater** consists of a radio on a simplex frequency and a digital voice recorder. When a signal is received, the recorder stores the message (usually up to 60 seconds maximum.). When the received signal ends, the digital voice recorder retransmits the message on the

same frequency. A commonly used term to describe this activity is “store and forward”.

- A **duplex repeater** uses two radio frequencies; a receive frequency for incoming signals and a transmit frequency, on which it retransmits the received signals. The repeater transmits and receives at the same time; i.e., simultaneously.

Some jurisdictions have deployed radio repeaters that provide interoperable communications allowing efficient coordination of first responders during an incident or planned event. These repeaters may be in fixed positions using permanent towers; or, they may be transportable, allowing for deployment at or near the incident scene. Proper operation of repeater stations is necessary for the efficient use of the interoperability channels, especially in minimizing and eliminating potential interference.

Best Practice Summary:

- Only the minimum number of calling channel repeaters should be in “Repeater ON” mode across the region.
- Repeaters on the tactical frequencies should always be in “Repeater OFF” mode, unless they are actually in use.
- Agencies should periodically check their repeaters to make sure they are in “Repeater OFF” mode to prevent interference to other agencies.
- Having multiple repeaters active on the same frequency in the same area causes the mobile and portable radio users to hear interference from multiple repeaters.
- Dispatch centers using direct repeater control normally cannot hear other active repeaters on their consoles unless they also have a monitor radio on that channel. They will hear the input channel from any mobile, portable,

or control stations from any agency within range of their repeaters.

Calling Channels - Many agencies monitor the calling channels for their area on their own repeaters.

Tactical Channels are used for incident communications.

- All tactical repeaters will be set to “Repeater Off”, or equivalent, unless needed for an incident or event in that area.
- If possible, configure tactical repeaters to default to “Repeater OFF” in the event of a power cycle or other disruption.
- In general, the tactical channel repeater that is closest to the incident and provides the minimum effective coverage area for the incident should be used. This allows greater reuse of frequencies for multiple incidents across the region.

Requesting a Repeater - The incident COML/COMC or their designee determines when a situation exists that requires the use of a repeater and notifies the appropriate dispatch center. The COML or COMC determines what repeater are available for use, identifies a specific repeater, activates that repeater, and coordinates the repeater deployment with the requesting agency Incident Commander or their designee.

RADIO CACHE

A “radio cache” refers to a designated reserve of standby radios that can be deployed to support regional incidents. These radios may be from a regional cache or from a participating agency. These radios allow all responders to use common, compatible equipment during an incident.

Requesting a Cache - The incident COML/COMC or their designee determines when a situation exists that requires the use of a radio cache and notifies the appropriate dispatch center. The COML or COMC determines what radio caches are available for use, identifies a specific cache, activates that cache, and coordinates the cache deployment with the requesting agency Incident Commander or their designee.

DATA COMMUNICATIONS

Data Communications refers to deployable computer networks, devices and applications that support real time data exchange between public safety entities involved in a coordinated incident response or any mutual aid effort.

Networks/Connections

The Radio Access Network (RAN) portion of the network consists of the radio base station infrastructure that connects to user devices. RAN includes cell towers as well as mobile hotspots embedded in vehicles that backhaul to the core network over satellite or other types of wireless infrastructure.

A local area network (LAN) is a group of computers and associated devices that share a common communications line or wireless link to a server. Typically, a LAN encompasses computers and peripherals connected to a server within a distinct geographic area such as an office or a commercial establishment. Computers and other mobile devices use a LAN connection to share resources such as a printer or network storage.

Devices/Sensors

Devices and sensors refer to the many types of user access points that send and receive voice, data, or video information over the network. Devices and sensors consist of hardware items such as smartphones, computers/laptops, telecommunications systems, tablets, dongles, and cameras, along with a wide variety of specialized products designed for public safety or other purposes. Device Type Description: End-User Handheld (e.g., voice, data, video, multi-function, etc.), Remote Sensor (e.g., handheld/ portable, transportable, vehicle mounted, fixed site), IP Camera, Environmental Sensor.

Applications

A mobile application, most commonly referred to as an app, is a type of application software designed to run on a mobile device, such as a smartphone or tablet computer. Mobile applications frequently serve to provide users with similar services to those accessed on PCs.

MOBILE COMMUNICATIONS UNITS (MCU)

A Mobile Communications Unit (MCU) refers to any vehicular asset that can be deployed to provide or supplement communications. The following additional policies and procedures apply to establishing interoperable communications between agencies via MCUs:

- Equipment Return – The requesting agency is responsible for the return of any MCUs in the condition that they were received and/or as dictated by existing Memoranda of Agreement (MOAs).

- Resource Modifications – The requesting agency is not allowed to change anything in the MCU without written permission of the owning agency.
- Technical Support – Qualified MCU THSPs or COMTs must be available for on-scene support during the deployment of MCUs.

Generators

The following Host Agencies have transportable generator units for deployment to an incident.

AUXILIARY COMMUNICATIONS (AUXCOMM) FREQUENCIES

Through ICS the amateur radio section is known as AuxComm.

Amateur Radio Emergency Services (ARES)

A program of the American Radio Relay League (ARRL). ARES consists of amateur radio operators who volunteer to provide emergency communications when needed. ARES groups are structured at the county level and often closely aligned with emergency management functions.

Radio Amateur Civil Emergency Service (RACES)

RACES is a volunteer organization of licensed amateur radio operators registered with the local (county) emergency management organization to provide auxiliary emergency communications on behalf of local, state or federal government.

Although the FCC is responsible for the creation and regulation of RACES operations, management is the responsibility of the Federal Emergency Management Administration (FEMA).

Each local RACES group is administered by a local government agency responsible for disaster services. RACES may be

activated by the director of an emergency management office, or authorized representative, for a particular area. The activation is in accordance with an approved civil defense communications plan.

¹ DOC does not have a shared system; 8TAC93 is licensed for use at DOC prisons. With Duty Officer approval, may be used to support local incident response, management, and recovery.

OTHER SHARED SYSTEM INFORMATION

OSCCR: Primarily used by public-safety agencies, "on-scene" at an event/incident, for command and coordination of activities between agencies. OSCCR can only be employed in the simplex mode via mobile and/or handheld equipment. For further information and/or to obtain authorization for its use contact the EMD Telecommunications Section at: 253-512-7036.

SECURE: Operates on 8 discrete frequencies, Fixed HF stations are in the State EOC and each WSP district communications center and is licensed to operate on up to 5 mobile stations.

SECURE serves as a "secondary" limited back-up communications system for direction and control use within the state, as needed. It also serves as a capability to communicate with FEMA Region X, Idaho, and Oregon. It is an HF radio system employing two stations located in the State EOC, the Spokane EOC, and a mobile station operated by the Military Department. The frequencies authorized by FCC and FEMA for use on the system are:

Primary (Day): 5.192 MHz

Primary (Night): 2.411 MHz

Primary (Day - Interstate): 7.805 MHz

Primary (Night - Interstate): 2.326 MHz

Other assigned frequencies: 2.801 MHz, 2.414 MHz, 2.587 MHz, and 7.935 MHz.

Frequencies are operated upper sideband (USB). A local jurisdiction EOC will operate on this system when the need is identified, and the capability is provided by the state EMD Telecommunications and Warning Program Manager.

DFW Tactical Channels: Fish & Wildlife has included the following channels in the Radio Sharing Agreement. DNR use is secondary; these may be used as a last resort. As noted, there are Canadian restrictions.

Name	User RX	Tone	User TX	Tone	Notes
DFW TAC6	153.9350	186.2	153.9350	186.2	1

SECURE: Operates on 8 discrete frequencies, Fixed HF stations are in State EOC and each WSP district communications center and is licensed to operate on up to 5 mobile stations.

SECURE serves as a "secondary" limited back-up communications system for direction and control use within the state, as needed. It also serves as a capability to communicate with FEMA Region X, Idaho, and Oregon. It is an HF radio system employing two stations located in the state Emergency Operations Center (EOC), the Spokane EOC, and a mobile station operated by the Military Department. The frequencies authorized by FCC and FEMA for use on the system are:

Primary (Day): 5.192 MHz

Primary (Night): 2.411 MHz

Primary (Day - Interstate): 7.805 MHz

Primary (Night - Interstate): 2.326 MHz

Other assigned frequencies: 2.801 MHz, 2.414 MHz, 2.587 MHz, and 7.935 MHz

Frequencies are operated upper sideband (USB). A local jurisdiction EOC will operate on this system when the need is identified, and the capability is provided by the state EMD Telecommunications and Warning Program Manager.

DFW Tactical Channels: Fish & Wildlife has included the following channels in the Radio Sharing Agreement. DNR use is secondary; these may be used as a last resort. As noted, there are Canadian restrictions.

Default operation should be carrier squelch receive, CTCSS 156.7(5a) TX. If the user can enable/disable CTCSS without reprogramming the radio, the indicated CTCSS tone should also be programmed for receive, and the user instructed how and when to enable/disable.

Base Stations: 50 watts max, antenna HAAT 400 feet. max. Mobile Stations: 20 watts max, antenna HAAT 15 feet max. These channels are for tactical use and may not be operated on board aircraft in flight. These channels use narrowband FM and are available only in certain inland areas at least 100 miles from a major waterway. These channels are VHF Maritime channel 25 (all 33 areas). Use only where authorized. In these authorized areas, interoperability communications have priority over grandfathered public coast & public safety.

Other Shared System Information

OSCCR: Primarily used by public-safety agencies, "on-scene" at an event/incident, for command and coordination of activities between agencies. OSCCR can only be employed in the simplex mode via mobile and/or handheld equipment. For further information and/or obtain authorization for its use contact the EMD Telecommunications Section at: 253-512-7036

SECURE: Operates on 8 discrete frequencies, Fixed HF stations are in State EOC and each WSP district communications center and is licensed to operate on up to 5 mobile stations.

SECURE serves as a "secondary" limited back-up communications system for direction and control use within the state, as needed. It also serves as a capability to communicate with FEMA Region X, Idaho, and Oregon. It is an HF radio system employing two stations located in the state Emergency Operations Center (EOC), the Spokane EOC, and a mobile station operated by the Military Department. The frequencies authorized by FCC and FEMA for use on the system are:

Primary (Day): 5.192 MHz

Primary (Night): 2.411 MHz

Primary (Day - Interstate): 7.805 MHz

Primary (Night - Interstate): 2.326 MHz

Other assigned frequencies: 2.801 MHz, 2.414 MHz, 2.587 MHz, and 7.935 MHz

Frequencies are operated upper sideband (USB). A local jurisdiction EOC will operate on this system when the need is identified, and the capability is provided by the state EMD Telecommunications and Warning Program Manager.

DFW Tactical Channels: Fish & Wildlife has included the following channels in the Radio Sharing Agreement. DNR use is secondary; these are to be used as a last resort. As noted, there are Canadian restrictions.

Default operation should be carrier squelch receive, CTCSS 156.7(5a) TX. If the user can enable/disable CTCSS without reprogramming the radio, the indicated CTCSS tone should also be programmed for receive, and the user instructed how and when to enable/disable.

Base Stations: 50 watts max, antenna HAAT 400 feet. max. Mobile Stations: 20 watts max, antenna HAAT 15 feet max. These channels are for tactical use and may not be operated on board aircraft in flight. These channels use narrowband FM and are available only in certain inland areas at least 100 miles from a major waterway. These channels are VHF Maritime channel 25 (all 33 areas). Use only where authorized. In these authorized areas, interoperability communications have priority over grandfathered public coast & public safety.

Other Shared System Notes

For Seattle King UASI Shared System: This radio system is operated and managed by: King County Radio Communications Board.

The regional system consists of several subsystems (called sub-regions) joined together by electronic switching equipment. Each sub-region owns and manages their portion of the system. Sub-regions include: The City of Seattle, Valley Communications Center, Eastside Public Safety Communications Agency (EPSCA), and King County.

AUXILIARY COMMUNICATIONS (AUXCOMM) FREQUENCIES

Name	Primary Use	Frequency		Tone
		Rx	Tx	Rx/Tx
No Data				
Note: Operations on Amateur Radio Frequencies requires an appropriately licensed Amateur Radio Operator. Refer to FCC Rules, Part 97, or, The American Radio Relay League for more detailed information.				

INTEROPERABLE AND MUTUAL AID FREQUENCIES

Name	Primary Use	Frequency		Tone
		Rx	Tx	Rx/Tx
SECURE	Day-5.192 MHz	5.1920	5.1920	
SECURE	Night-2.411 MHz	2.4110	2.4110	
SECURE	Day Interstate-7.805 MHz	7.8050	7.8050	
SECURE	Night Interstate-2.326 MHz	2.3260	2.3260	

Note: SECURE serves as a "secondary" limited back-up communications system for direction and control use within the state, as needed. It also serves as a capability to communicate with FEMA Region X, Idaho, and Oregon.

SECURE is an HF radio system employing two stations located in the state Emergency Operations Center (EOC), the Spokane EOC, and a mobile station operated by the Military Department.

Frequencies authorized by FCC and FEMA for use on the system are:

Primary (Day): 5.192 MHz / Primary (Night): 2.411 MHz / Primary (Day - Interstate): 7.805 MHz / Primary (Night - Interstate): 2.326 MHz

Other assigned frequencies:

2.801 MHz / 2.414 MHz / 2.587 MHz / 7.935 MHz

Frequencies are operated upper sideband (USB).

A local jurisdiction EOC will operate on this system when the need is identified, and the capability is provided by the state EMD Telecommunications and Warning Program Manager.

REGION 9 MAPS

OSCCR Towers in Region 9

OSCCR: Primarily used by public-safety agencies, "on-scene" at an event/incident, for command and coordination of activities between agencies. OSCCR can only be employed in the simplex mode via mobile and/or handheld equipment. For further information and/or obtain authorization for its use contact the EMD Telecommunications Section at: 253.512.7036

<https://mil.wa.gov/other-radio-systems>.

Washington State CEMNET

12 sites operating on 3 VHF low-band frequencies, Base stations controlled from State EOC through WSP microwave system, and Primary backup communication link.

CEMNET REGION AND CHANNEL ASSIGNMENTS

Local jurisdictions listed above are authorized to use the assigned region channel for local operations. Each local license holder is authorized to operate up to five (5) mobiles.

PSAPs and WSP Communications Centers

700 MHz trunked in Puget Sound, 100 transceiver sites, 6 GHz microwave system for backhaul, voice and data, 8 dispatch centers, and 3,800 subscriber units.

NATIONAL INTEROPERABILITY CHANNELS

Recommended programming, shared channel/frequency information, radio caches, gateways, and MCUs are listed in this section.

All transmit and receive frequencies are listed as they would be programmed into portable radios, mobile or control point radios. Programming of repeaters **MUST** reverse the “receive” and “transmit” frequencies and tones shown in the table below.

CTCSS Tones – Default operation should be carrier squelch receive (CSQ), CTCSS Transmit. If the user can enable/disable without programming the radio, the indicated CTCSS tone also could be programmed for receive, and the user instructed how and when to enable/disable. In some regions of the state, a PL code is used on both Rx and Tx. If you are not sure, leave Rx as CSQ.

Many channels are also setup for repeater operation. Each of those channels have a corresponding direct channel which is the same as the repeater output. Therefore, if you hear a mention of 8TAC91D, it is the same output frequency of 8TAC91. Since the output frequency is the same, the channels with the "D" suffix will not be listed separately.

VTAC17 is the same as Marine Channel 25 and may only be used in areas at least 100 miles from a navigable waterway and by ground stations only.

RECOMMENDED PROGRAMMING FOR NATIONAL INTEROPERABILITY CHANNELS

Non-Federal VHF Low Band National Interoperability Channels

Description	Ch Name	RX	TX	RX/TX Tone
Law Enforcement	LLAW1	39.4600	45.8600	156.7 (5A)
Law Enforcement	LLAW1D	39.4600	39.4600	156.7 (5A)
Fire (Proposed)	LFIRE2	39.4800	45.8800	156.7 (5A)
Fire (Proposed)	LFIRE2D	39.4800	39.4800	156.7 (5A)
Law Enforcement	LLAW3	45.8600	39.4600	156.7 (5A)
Law Enforcement	LLAW3D	45.8600	45.8600	156.7 (5A)
Fire (Proposed)	LFIRE4	45.8800	39.4800	156.7 (5A)
Fire	LFIRE4D	45.8800	45.8800	156.7 (5A)

Frequency 39.4800 MHz is pending FCC assignment for exclusive fire intersystem use.
 These channels are WIDEBAND FM, 20 kHz authorized bandwidth.

Non-Federal VHF High Band National Interoperability Channels

Description	Ch Name	RX	RX Tone	TX	TX Tone
Calling	VCALL10	155.7525	156.7 (5A)	155.7525	156.7 (5A)

Tac Rpt	VTAC34 * •	158.7375	156.7 (5A)	154.4525	136.5 (4Z)
Tac Rpt	VTAC35 •	159.4725	156.7 (5A)	158.7375	136.5 (4Z)
Tac Rpt	VTAC36 * •	151.1375	156.7 (5A)	159.4725	136.5 (4Z)
Tac Rpt	VTAC37 * •	154.4525	156.7 (5A)	158.7375	136.5 (4Z)
Tac Rpt	VTAC38 •	158.7375	156.7 (5A)	159.4725	136.5 (4Z)

*VTAC11-12, VTAC33-34, and VTAC36-37 may not be used in Puerto Rico or the USVI.

- VTAC33-38 recommended for deployable tactical repeater use only (FCC Station Class FB2T).
- **VTAC36-38 are preferred; VTAC33-35 should be used only when necessary due to interference.** These channels are NARROWBAND only.

Non-Federal VHF Inland National Interoperability Channels

Ch Name	Description	RX	TX
VTAC17	Tactical – narrowband FM	161.8500	157.2500
VTAC17D	Tactical – narrowband FM	161.8500	161.8500

CTCSS 156.7 Hz(5A) transmit and receive.
For **VTAC17/VTAC17D only**: Base stations: 50 watts max, antenna HAAT 400 feet max. Mobile stations: 20 watts max, antenna HAAT 15 feet max. These channels are for tactical use and may not be operated on board aircraft in flight. These channels use narrowband FM and are available only in certain inland areas at least 100 miles from a major waterway. These channels use the same frequencies as VHF Marine channel 25, which uses wideband FM. Use only where authorized. These channels are **NARROWBAND** only. Use of these channels must be licensed, or authorized by STA.

VHF Public Safety Mutual and Common Interoperability Channels

WARNING: These frequencies are NOT covered by the blanket authorization for nationwide interoperability channels. A valid FCC license for these frequencies is required. Availability subject to other licensed users in the same area.

Frequency base/mobile	Usage	Ch Name	Note
155.1600	Search and Rescue (SAR) Common (CTCSS 127.3 TX & RX)	VSAR16 a.k.a. SAR NFM & SAR160	Not restricted to SAR by FCC; availability varies.
154.2800	Fire Mutual Aid (MA)	VFIRE21	Not available in Puerto Rico and the U.S. Virgin Islands.
154.2650		VFIRE22	
154.2950		VFIRE23	
154.2725		VFIRE24	
154.2875		VFIRE25	
154.3025		VFIRE26	
155.3400	EMS Mutual Aid	VMED28	May be designated for EMS MA
155.3475		VMED29	
155.4750	LE Mutual Aid	VLAW31	
155.4825		VLAW32	

LICENSING REQUIRED - These are NOT nationwide interoperability channels - CTCSS tones vary by jurisdiction. Rules for use of these channels are contained in 47 CFR 90.20 and NTIA Manual Section 4.3.11 & 7.3.6. EXCEPT for VSAR16, the recommended CTCSS tones are 156.7 receive and transmit for all channels on this page for interoperability; local use may specify other tones.

VHF Incident Response (IR) Federal Interoperability Channels

Suggested Assignment (subject to availability & local plans)	Ch Name	Note	RX	TX
Incident Calling	NC 1	Calling	169.5375	164.7125
Incident Command	IR 1		170.0125	165.2500
Medical Evacuation Control	IR 2		170.4125	165.9625
Logistics Control	IR 3		170.6875	166.5750
Interagency Convoy	IR 4		173.0375	167.3250
Incident Calling (Direct)	IR 5	Direct for NC 1 Calling	169.5375	169.5375 (S)
Incident Command (Direct)	IR 6	Direct for IR 1	170.0125	170.0125 (S)
Medical Evacuation Control (Direct)	IR 7	Direct for IR 2	170.4125	170.4125 (S)
Logistics Control (Direct)	IR 8	Direct for IR 3	170.6875	170.6875 (S)
Interagency Convoy (Direct)	IR 9	Direct for IR 4	173.0375	173.0375 (S)
Default operation should be carrier squelch receive; CTCSS 167.9 transmit. If the user can enable/disable CTCSS. Without reprogramming the radio, the indicated CTCSS tone also could be programmed for receive, and the user instructed how and when to enable/disable. These channels are NARROWBAND only.				

VHF Law Enforcement (LE) Federal Interoperability Channels

Description	Ch Name	Note	RX	TX	RX/TX Tone
Calling	LE A	Analog	167.0875	167.0875 (S)	167.9 / CSQ
Tactical	LE 1	Analog	167.0875	162.0875	167.9 / CSQ
Tactical	LE 2		167.2500	162.2625	\$68F (167910)

Tactical – Direct	8TAC94D	853.0125 (868.0125)	853.0125 (868.0125)

CTCSS 156.7(5A) receive and transmit.

*The frequency in parenthesis, which is 15 MHz higher, is the frequency used before Rebanding - channel names were ICALL, ITAC1 - ITAC4. Wideband FM 20K0F3E before and after Rebanding.

Federal/Non-Federal VHF SAR Operations Interoperability Plan

Suggested SAR Function	Frequency (MHz)
Ground Operations	155.1600 narrowband FM
Maritime Operations *	157.050 or 157.150 (VHF Marine ch.1021 or 1023) as specified by USCG Sector Commander
Air Operations – civilian	123.100 MHz AM (may not be used for tests or exercises)
Air Operations – USCG/Military	345.0 MHz AM for initial contact only, then move to 282.8 MHz AM or another working channel
Air rescue assets to air rescue assets (deconfliction)	As charted on standard air chart or MULTICOM 122.850 (south or west sector) & 122.900 MHz (north or east sector), or as specified by FAA. 122.850 may not be used for tests or exercises
Ground to Air SAR working channel	157.175 1083 (1021, 1023, 1081 alternates as specified by local USCG Sector Commander) **
Ground to Maritime SAR working channel	157.050 1021 (1023, 1081, 1083 alternates as specified by local USCG Sector Commander) **
Maritime/Air/Ground SAR working channel *	157.175 1083 (1021, 1023, 1081 alternates as specified by local USCG Sector Commander) **
EMS / Medical Support	155.3400 narrowband FM

Suggested SAR Function	Frequency (MHz)
Hailing* & DISTRESS only - Maritime/Air/Ground	156.800 VHF Marine channel 16 *
<p>* Use VHF Marine ch.16 to make contact (30 seconds max.), then move to appropriate working channel as directed by local USCG Sector Commander. Non-maritime use of any VHF Marine channel requires FCC Special Temporary Authority or appropriate license. VHF marine channels use wideband FM, emission 16K0F3E</p> <p>** VHF Marine channels: 16=156.800 1021=157.050 1022=157.100 1023=157.150 1081=157.075 1082=157. 125 1083=157. 1750 Direction from USCG, FCC, or FAA overrides information in this table. This table does not convey authority to operate.</p>	

COMMONLY USED FREQUENCIES

Federal/Non-Federal VHF SAR Operations Interoperability Plan	
Suggested SAR Function	Frequency (MHz)
Ground Operations	155.1600 narrowband FM
Maritime Operations *	157.050 or 157.150 (VHF Marine ch.21A or 23A) as specified by USCG Sector Commander
Air Operations – civilian	123.100 MHz AM (may not be used for tests or exercises)
Air Operations – USCG/Military	345.0 MHz AM for initial contact only, then move to 282.8 MHz AM or other working channel
Air rescue assets to air rescue assets (deconfliction)	As charted on standard air chart or MULTICOM 122.850 (south or west sector) & 122.900 MHz (north or east sector), or as specified by FAA. 122.850 may not be used for tests or exercises
Ground to Air SAR working channel	157.175 83A (21A, 23A, 81A alternates as specified by local USCG Sector Commander) **
Ground to Maritime SAR working channel	157.050 21A (23A, 81A, 83A alternates as specified by local USCG Sector Commander) **
Maritime/Air/Ground SAR working channel *	157.175 83A (21A, 23A, 81A alternates as specified by local USCG Sector Commander) **
EMS/Medical Support	155.3400 narrowband FM
Hailing* & DISTRESS only - Maritime/Air/Ground	156.800 VHF Marine channel 16 *
<p>* Use VHF Marine ch.16 to make contact (30 seconds max.), then move to appropriate working channel as directed by local USCG Sector Commander. Non-maritime use of any VHF Marine channel requires FCC Special Temporary Authority or appropriate license. VHF marine channels use wideband FM, emission 16K0F3E. ** VHF Marine channels: 16=156.800</p>	

Federal/Non-Federal VHF SAR Operations Interoperability Plan

Suggested SAR Function	Frequency (MHz)
21A=157.050 22A=157.100 23A=157.150 81A=157.075 82A=157.125 83A=157.1750. Direction from USCG, FCC, or FAA overrides information in this table. This table does not convey authority to operate.	

SAR (SEARCH AND RESCUE) FREQUENCIES

Land SAR

Typical frequencies are: 155.160, .175, .205, .220, .235, .265, .280, or .295 If CTCSS is required try 127.3 Hz (3A).

Air SAR

3023, 5680, 8364 kHz upper sideband (lifeboat/survival craft),
4125 kHz upper sideband (distress/safety with ships and coast stations)

121.5 MHz emergency and distress
122.9 MHz SAR secondary & training
123.1 MHz SAR primary

Water SAR

156.300 (VHF Marine ch 06) Safety and SAR
156.450 (VHF Marine ch 09) Non-commercial supplementary
calling 156.800 (VHF Marine ch 16) DISTRESS and calling
156.850 (VHF Marine ch 17) State & Local Government Maritime
Control
157.100 (VHF Marine ch 22A) Coast Guard Liaison

EMERGENCY SUPPORT FUNCTIONS (ESF)

ESF #1: Transportation	ESF #9: Search and Rescue
ESF #2: Communications	ESF #10: Oil & Hazardous Materials Response
ESF #3: Public Works and Engineering	ESF #11: Agriculture and Natural Resources Annex

ESF #6: Mass Care, Emergency Assistance, Temporary Housing, and Human Services	ESF #14: Cross-Sector Business and Infrastructure
ESF #7: Logistics	ESF #15: External Affairs
ESF #8: Public Health and Medical Services	Telephone number for all ESFs during activations 202-212-2424

SATELLITE COMMUNICATIONS SYSTEMS

Owning/Managing Agency	Sat Phone System	Equipment	Sat Phone #
State of [State]	Iridium		

DIALING INSTRUCTIONS FOR IRIDIUM

From a US Landline dial 011 + 8816xxxxxxx (Iridium Phone Number). Iridium PIN (default) is 1111 (enter when powering-on the Iridium Subscriber Unit. Iridium Test Call – no airtime charge: 00 + 1 + 480.752.5105

NAC – NETWORK ACCESS CODES

P25 DIGITAL CODES

NAC – Network Access Codes

\$293	659 ₁₀	default NAC
\$F7E	3966 ₁₀	receiver will un-squelch with any incoming NAC
\$F7F	3967 ₁₀	a repeater with this NAC will allow incoming signals to be repeated with the NAC intact

TGID – Talkgroup ID

\$0001	1 ₁₀	default
\$0000	0 ₁₀	no-one, talkgroup with no users – used for individual call
\$FFFF	65535 ₁₀	a repeater with this NAC will allow incoming signals to be repeated with the NAC intact

Unit ID

\$000000	0 ₁₀	default
\$000001-\$98767F	1 ₁₀ – 9991807 ₁₀	no-one, talkgroup with no users – used for individual call
\$989680-\$FFFFFFE	10000000 ₁₀ -16777214 ₁₀	a repeater with this NAC will allow incoming signals to be repeated with the NAC intact
\$FFFFFFF	16777215 ₁₀	designates everyone – used when implementing a group call with a TGID3

Note: Project 25 System Administrators should be aware of possible Unit ID conflicts when conducting operations with neighboring jurisdictions. System administrators should coordinate Unit IDs with agencies likely to operate on their system(s) to address any radio Unit ID conflicts.

“\$” indicates hexadecimal values, “10” subscript indicates decimal value.

CTCSS TONES AND CODES

* California FIREScope tone list, used by NIFC and CA fire agencies Ref.

<https://firescope.caloes.ca.gov/ICS%20Documents/2020%20MACS-441-1.pdf>.

** 69.4 in some radios CTCSS refers to subaudible tones which are used to access a repeater or open the squelch on a receiver. CTCSS tones are used in order to minimize co-channel interference and/or to “mask” unwanted transmissions. A repeater configured to require a CTCSS tone will remain silent until it receives a transmission from a radio sending the correct CTCSS tone. Likewise, a radio configured with a CTCSS tone on the receive side will not open squelch unless the transmitting station sends the correct tone. Communications Plans (ICS 205) should list any required CTCSS tones.

CTCSS Tones and Codes

Freq. (Hz)	Motorola Code	NIFC & CA Fire *	Freq. (Hz)	Motorola Code	NIFC & CA Fire *
67.0	XZ	17	136.5	4Z	4
69.3**	WZ		141.3	4A	13

127.3	3A	12	250.3	M7	
131.8	3B	3	254.1	OZ	

DCS CODES

DCS codes are a newer form of coded squelch that was added to offer additional options beyond the CTCSS tones. Some older radios do not have the ability to utilize DCS codes. DCS codes function the same and are utilized in a similar manner to CTCSS tones. Communications Plans documented on an ICS 205 should list any required DCS codes needed when programming radios. Use the tables below when searching for valid DCS codes.

DCS Codes

Normal	Inverted	Nor.	Inv.	Nor.	Inv.	Nor.	Inv.

Requesting GETS and WPS

- ❖ Designate a GETS/WPS Point of Contact (POC) for your organization.
- ❖ POC establishes GETS and WPS account online using www.cisa.gov/gets or www.cisa.gov/wps or by contacting the Priority Telecommunications Service Center at **1-866-627-2255**.
- ❖ POC requests GETS and WPS for an initial group of users/key functions/locations through the online system.
- ❖ POC distributes GETS Cards and confirms WPS activations.

NOTICE: A subscriber must specifically request GETS and/or WPS - signing up for one service does not automatically subscribe the POC to both.

Requesting TSP

- ❖ Request a TSP Account (TSP “POC”) through the Priority Telecommunications Service Center at 1-866-627-2255.
- ❖ Identify specific services for TSP; Submit TSP Service Request(s) on a per service basis.
- ❖ Upon approval, the Service Center sends TSP Code for each specific service.
- ❖ Order TSP through your service vendor.
- ❖ Update internal records and procedures to reflect implementation of TSP.

NOTICE: Signing up for TSP does not automatically subscribe the POC to GETS and/or WPS – a subscriber must specifically request each service of interest.

TEXT MESSAGING

“xxxxxxxxxx” is the 10-digit telephone number

In many emergency situations text messaging may be a better way of communication than actually calling on the cellular phones. Text messaging takes less bandwidth and time to send messages and may go through when voice calls are not possible.

TEXT MESSAGING	
Selected US & Canadian Cellular Text Messaging Carriers	
<i>“number” is the 10-digit mobile telephone number, unless 11-digit-number is specified</i>

DIALING INSTRUCTIONS FOR IRIDIUM

From a US Landline dial 011 + 8816xxxxxxx (Iridium Phone Number). Iridium PIN (default) is 1111 (enter when powering-on the Iridium Subscriber Unit. Iridium Test Call – no airtime charge: 00 + 1 + 480.752.5105

STANDARD PHONETIC ALPHABET

The phonetic alphabet (shown below) is a standard international procedure for transmission of difficult to pronounce words or place names. The excess use of the phonetic alphabet wastes time on radio networks.

Clarification of words can very often be made using plain English spelling without the need to resort to phonetic spelling.

A	Alfa	H	Hotel	O	Oscar	V	Victor
B	Bravo	I	India	P	Papa	W	Whiskey
C	Charlie	J	Juliet	Q	Quebec	X	X-ray
D	Delta	K	Kilo	R	Romeo	Y	Yankee
E	Echo	L	Lima	S	Sierra	Z	Zulu
F	Foxtrot	M	Mike	T	Tango		
G	Golf	N	November	U	Uniform		

ICS PLANNING FORMS

This section contains descriptions of common ICS forms that are used in communications planning or have communications information on them that is provided by the COML.

The only form developed by the Communications Unit that is included in the Incident Action Plan (IAP) is the ICS 205, Incident Radio Communications Plan. The other forms are used to develop the ICS 205 and are kept within the Communications Unit for reference. ICS 204, Field Assignment Form(s) and ICS 206, Incident Medical Plan contain communication data and should be verified/validated by the COML before publication.

FEMA has All-Hazards ICS forms at:

<https://training.fema.gov/icsresource/icsforms.aspx>

ICS 201 - Incident Briefing

Purpose: The Incident Briefing form provides the basic information regarding the incident situation and resources allocated to the incident.

Preparation: The briefing form is prepared by field command for presentation to the IMT along with a more detailed oral briefing.

ICS 203 - Organization Assignment List

Purpose: The Organization Assignment List provides ICS personnel with information on the units that are currently activated and the names of personnel staffing each position/unit. It is used to complete the ICS 207.

Preparation: The Resources Unit prepares and maintains this list under the direction of the Planning Section Chief.

ICS 204 - Field Assignment Form

Purpose: The Field Assignment form is used to inform Operations Section personnel of their incident assignments.

Preparation: The Field Assignment form is normally prepared under direction of the Planning Section Chief using guidance from the ICS 202, ICS 215, and the Operations Section Chief. Radio frequencies listed on the ICS 204 shall be coordinated and confirmed by the COML.

ICS 205 - Incident Radio Communications Plan

Purpose: The Incident Radio Communications Plan provides, in one location, information on the assignments for all communications equipment for each operational period.

Information from the ICS 205 on frequency assignments can be placed on the appropriate Field Assignment Form (ICS 204) and the Incident Medical Plan (ICS 206).

Preparation: The Incident Radio Communications Plan is prepared by the Communications Unit Leader.

ICS 206 - Medical Plan

Purpose: The Medical Plan provides information on incident medical aid stations, transportation services, hospitals, and emergency medical procedures.

Preparation: The Medical Plan is prepared by the Medical Unit Leader and reviewed by the Safety Officer. Radio frequency and telephone numbers listed on the ICS 206 shall be coordinated and confirmed by the COML.

ICS 207 - Incident Organization Chart

Purpose: The Incident Organization Chart provides information on the response organization and personnel staffing.

Preparation: The list is prepared and maintained by the Resources Unit under the direction of the Planning Section Chief.

Note: An organization chart may be completed any time the number of personnel assigned to the incident increases or decreases or a change in assignment occurs.

ICS 211 - Incident Check-In List

Purpose: Personnel and equipment arriving at the incident can check in at various incident locations. Check-in consists of reporting specific information, which is recorded on the form.

Preparation: The Check-In List is initiated at a number of incident locations including staging areas, base camps, Helibases, and ICP.

Managers at these locations record the information and give it to the Resources Unit as soon as possible.

ICS 213 - General Message

The General Message form is used by

- Incident dispatchers to record incoming messages which cannot be orally transmitted to the intended recipients.
- EOC and other incident personnel to transmit messages via radio or telephone to the addressee.
- Incident personnel to send any message or notification which requires hard-copy delivery to other incident personnel.

Preparation: The General Message form may be initiated by incident dispatchers and any other personnel on an incident. Two copies should be sent and one copy retained by the person who initiates the message.

ICS 214 - Unit Log

Purpose: The Unit Log is used to record details of unit activity including specialized team activity (e.g., Strike Team). These Unit Logs can provide a basic reference from which to extract information for inclusion in an after-action report.

Preparation: A Unit Log is initiated and maintained by Command and General Staff members, field command, and Unit Leaders. Completed logs are forwarded to supervisors, who provide copies to the Documentation Unit.

ICS 217A - Communications Resource Availability

Purpose: The Communications Resource Availability Worksheet (ICS 217A) is a template that users may fill out prior to an incident. An agency's interoperable channels and/or talkgroups can be entered on the form, thereby enabling a COML to have the technical information readily available to complete an Incident Radio Communications Plan (ICS 205).

Preparation: The Communications Resource Availability Worksheet is prepared by a COMC or COML in an administrative setting prior to an incident. The ICS 217A provides a standardized template for the presentation of channels or talkgroups that might be considered for use by appropriate personnel during an incident. ICS 217A is duplicated and given to all appropriate Communications Unit personnel who are authorized to use the agency's resources during an incident. This may include COMLs, COMTs, THSPs, etc.

ICS 309 - Communications Log

Purpose: The Communications Log (ICS 309) is used to document radio traffic handled by the ICC. It includes the date and time of the radio traffic as well as the source and destination and a summary of the content of the radio traffic.

Preparation: The Communications Log is maintained by the RADO on an ongoing basis as radio traffic is handled.

NOTES

NOTES

General Rules of Use for Communications Equipment or Channels

- ❖ Shall only be used for official business or emergency communications
- ❖ Shall be consistent with Federal Communications Commission (FCC) or National Telecommunications and Information (NTIA) Rules
- ❖ Use during a Type 3, 2, or 1 incident shall be authorized by the COML of the incident
- ❖ Verify that an interoperability channel is clear before transmitting to avoid interfering with the communications of another user
- ❖ Rules and Guidelines of interoperable channels (i.e., ISPERN, IREACH, IFERN, etc.)
- ❖ Only users actively participating in the incident or authorized by a COML or COMC should monitor or transmit on a given talkgroup
- ❖ Scanning across multiple channels should be avoided when using interoperable communications
- ❖ All voice radio communications are to be brief and concise
- ❖ No use of nicknames, slang, or Citizens Band (CB) type handles shall be used on any interoperable channels
