Technical decisions affecting the Shared Tenant route through the Cloud Enablement Advisory Committee (CEAC) to the Enterprise Active Directory Steering Committee (EAD/SC).

- The CEAC is an advisory committee comprised of technical resources with delegated authority from their agency CIO. The CEAC analyzes issues and makes recommendations to the EAD/SC.
- The EAD/SC is a decision-making body comprised of CIOs from EAD member agencies.
- Recommendations sent to the EAD/SC are discussed in a public meeting followed by an email vote. With a quorum present, the vote is by simple majority. The vote (votes to date are posted here) is tabulated and kept by the EAD Chair and published to the EAD/SC.

Technical decisions include, for example, default settings established at the global level. Charters for the committees are available via the links above.

Strategic and business decisions are discussed first at the WaTech Advisory Council. WAC recommendations are then submitted to the Enterprise Core Team for final vote.

- The WAC is an advisory committee comprised of six CIOs elected by and chartered to represent the CIO community.
- The Core Team is an appointed body comprised of Agency Directors and the chairperson of the WAC.

Example business decisions include operational support models and cost recovery.
